PROFESSIONAL SUMMARY

Senior backend engineer with 6+ years of product-delivery experience across distributed services, developer tooling, operational dashboards, and customer-facing workflows. My primary stack is Node.js and TypeScript, supported by production experience with React, Next.js, Vue.js, PostgreSQL, Redis, AWS, and C#/.NET.

I have scaled an event-driven platform to 100,000+ devices at 99.9% uptime, engineered pipelines processing millions of events daily, and reduced critical API latency by 67% through observability-driven optimization. I use Orca with OMP as my primary daily agentic engineering workflow for implementation, review, debugging, and verification while retaining ownership of architecture, testing, and production outcomes.

TECHNICAL SKILLS

Product Engineering: Customer and provider discovery, ambiguous requirements, end-to-end delivery, production operation

Backend: Node.js, TypeScript, C#, .NET Core, REST APIs, API Integration, SDK Design

Frontend: Vue.js, React, Next.js, TypeScript

Architecture: Distributed Systems, Microservices, Event-Driven Systems, Multi-Tenancy, Claims-Based Authorization

Reliability: Retry, Dead-Letter Queues, Circuit Breakers, Backpressure, Caching, Incident Investigation

Cloud & Data: AWS (Lambda, SQS, S3, EC2), PostgreSQL, Redis, MongoDB, SQL Server, Docker

Observability: New Relic, Sentry, CloudWatch, Performance Profiling, Dashboards, SLA Monitoring

Delivery: Orca + OMP Agentic Development, CI/CD, GitHub Actions, GitLab CI, Automated Testing, Code Review

PROFESSIONAL EXPERIENCE

LUXURY ESCAPES — Senior Backend Engineer

May 2023 - Present | Remote from Brazil

Node.js, TypeScript, PostgreSQL, Redis, AWS, Microservices

- Architected and delivered the backend integration for a new international car-hire product, covering provider contracts, inventory, dynamic pricing, booking, cancellation, error handling, and reconciliation.
- Delivered 1,500+ bookings in the first year with zero critical post-launch bugs.
- Worked directly with Product, Design, business stakeholders, and an external provider's engineers to validate requirements, define API SLAs, and adapt the solution through launch.
- Architected a B2B2C agent platform with commission calculation, automated invoicing, reconciliation, role-based access control, and multi-agency oversight.
- Reduced manual commission processing by 90% through automation.
- Reduced critical API response times by 67%, from 1.2 seconds to 400 milliseconds, using New Relic data to identify and resolve query bottlenecks.
- Improved a hotel-provider integration layer across multiple third-party APIs through circuit-breaker tuning and response caching.
- Built internal CLI tooling and New Relic dashboards adopted across the team, standardizing debugging and production investigation workflows.

PORTER GROUP — Backend Engineer

August 2021 - March 2023 | Brazil

C#, .NET Core, PostgreSQL, MongoDB, Redis, AWS SQS, Docker

- Architected backend services supporting thousands of condominiums and 100,000+ IoT devices on AWS infrastructure.

- Designed event-driven microservices for real-time monitoring, access control, and alert management.
- Achieved 99.9% uptime through retry, dead-letter queues, circuit breakers, and remediation of message backpressure during peak traffic.
- Reduced alert latency by 60% by optimizing message-processing pipelines.
- Engineered a high-throughput ingestion service processing millions of daily events from third-party devices.
- Built SDK adapters and a unified normalization layer across 15+ manufacturers, reducing integration time from weeks to days.
- Reduced deployment time by 40% through CI/CD improvements and automation scripts adopted across the team.

HAVAN — Backend Developer

October 2020 - August 2021 | Brazil

C#, .NET Core, Angular, Vue.js, SQL Server, Redis

- Led the modernization of a legacy internal product using Vue.js, Angular, and .NET Core, delivering on schedule with zero critical bugs.
- Owned reliability for five mission-critical systems supporting operations across 130+ stores.
- Built real-time operational dashboards and a notification engine that gave retail teams visibility into daily workflows.
- Mentored junior developers in clean architecture, automated testing, and code review.

FATEC OURINHOS — Software Engineer Intern

March 2020 - October 2020 | Brazil

React Native, Node.js, REST APIs

- Built the mobile application and Node.js backend for a digital municipal parking product adopted as the city's official solution.
- Integrated payments and delivered an administrative analytics dashboard; the application reached 5,000+ downloads in its first month.

SELECTED PROJECT

Student ID Platform — Next.js, Node.js, Supabase

Delivered a previously incomplete platform serving 120+ student organizations and processing 100,000+ digital student IDs annually. Built configurable user workflows, administrative tooling, PDF generation, role-based access control, onboarding, and unit, integration, and end-to-end tests.

EDUCATION & LANGUAGES

Bachelor's in Information Systems — UNIFEFE, Brazil | 2023

Software Engineering studies — UTFPR, Brazil | 2018-2019; transferred

English: C1, IELTS Academic 8.0 | **Portuguese:** Native
