PROFESSIONAL SUMMARY

Senior backend engineer with 6+ years of experience in Node.js, TypeScript, C#.NET and distributed systems. For three years, I have worked remotely with an Australian travel company, owning booking and supplier integrations from design to production. I have launched a new car-hire vertical, built B2B2C travel workflows, and engineered event-driven services for an IoT platform supporting 100,000+ devices. I use Orca with OMP as my primary AI-assisted coding, review, and verification interface while remaining accountable for architecture and production outcomes.

TECHNICAL SKILLS

Backend: Node.js, TypeScript, C#, .NET Core, REST APIs, supplier integrations

Systems: Microservices, event-driven architecture, AWS SQS, retries, dead-letter queues

Cloud & data: AWS Lambda, S3, EC2, PostgreSQL, Redis, MongoDB, SQL Server

Delivery: System design, CI/CD, automated testing, observability, New Relic, cross-functional collaboration

PROFESSIONAL EXPERIENCE

LUXURY ESCAPES — Senior Backend Engineer

May 2023 – Present | Remote from Brazil for Australian travel company

Node.js, TypeScript, PostgreSQL, Redis, AWS

- Led the backend integration of a major car-hire provider for a new travel vertical, mapping API contracts and building availability, booking, cancellation, error handling, and reconciliation flows.
- Partnered with Product, Design, business stakeholders, and the provider's engineers to clarify requirements, agree on API behavior, and deliver the launch.
- Architected B2B2C agent booking workflows, commission rules, invoicing, and reconciliation for regional launches.
- Improved a critical API's latency by profiling database queries with New Relic and resolving bottlenecks.
- Delivered Sabre post-booking e-ticket distribution and schedule-change safeguards; improved hotel partner self-service and supplier integrations.

PORTER GROUP — Full Stack Software Engineer

August 2021 – March 2023 | Brazil

C#, .NET Core, PostgreSQL, MongoDB, Redis, AWS SQS, Docker

- Built backend services and telemetry pipelines for an IoT platform supporting 100,000+ devices across Brazil.
- Designed event-driven ingestion and alerting with SQS, retries, dead-letter queues, and backpressure remediation for security-critical workflows.
- Integrated third-party device SDKs and normalized data across protocols to make new device integrations repeatable.

HAVAN — Junior Engineer to Tech Lead

October 2020 – August 2021 | Brazil

C#, .NET Core, Angular, Vue.js, SQL Server, Redis

- Promoted to Tech Lead within 10 months; led a squad modernizing legacy retail workflows across CRM, purchasing, and document services.

FATEC OURINHOS — Software Engineer Intern

March 2020 – October 2020 | Brazil

React Native, Node.js

- Built the mobile app and Node.js backend for a municipal digital parking system, including payment integration and administration tools.

EDUCATION & LANGUAGES

Bachelor's in Information Systems — UNIFEBE, 2023

English: C1 (IELTS Academic 8.0) | Portuguese: Native
